

## Leader Hardware

Leader  
Software

Sensor  
Follower

Actuator  
Follower

***This “Leader Hardware” with  
“Linux Automotive Grade” Operat-  
ing System structure has 3 models:***

***Renesas R-car-H3***

***STM32H7 600MHz***

***STM32F2 120MHz***

***All these models use 24VDC as  
main power supply and installed in  
aluminium IP67 box.***

Sensor Follower

Actuator  
Follower

**“Sensor Follower” based on STM32 microcontroller with 7 types as shown in below table.**

**These 7 types are classified as basic sensors output properties.**

- 24V  
- CAN  
- 5V  
- Loop

For easy troubleshooting 4 LEDs show the working situation.

- Sensor 1  
- Sensor 2  
- ...  
- Sensor 8

The 8 LEDs show the 8 sensors fault.

Follower Types							
FF	Type	Color	Range	Devices	UpC	DownC	Sample
01	Current	Cyan	4-20 mA	Sensor 4x3Pin	2xG4	2xG6	OilP, TiltA, HighC,HydF
02	Millivolt	Maroon	30-300 mVDC	Sensor 4x4Pin	2xG4	2xG8	LoadcellW
03	Ohm	Orange	50-400 Ω	Sensor 4x3Pin	2xG4	2xH6	OilT, AirH
04	Button	Blue	0/1	Sensor 8x2Pin + 8Neg.	2xG4	2xG8	ProxiM, WheelR, DoorM
05	Volt	Violet	0-10 VDC	Sensor 8x2Pin + 8Neg.	2xG4	4xH4	AirT, HighV, HeightD
08	Encoder	Eggplant	-	Sensor 4	2xG4	G8	WireE, WheelE
09	USB	Umber	USB/RS232/SPI	Sensor 4	2xG4	USB	TPMS, 3AxesG, ObstacleL

**“Sensor Follower” based on STM32 microcontroller with 7 types as shown in below table. These 7 types are classified as basic sensors output properties.**

- 24V
